DAILY MANURE CLEAN-UP LOG

Ultimately, it would be best to fence-off and/or tie-up all animals a significant distance away from any production field and/or processing facility, at all times, as animals can excrete pathogens harmful to humans. However, in the case where there is a few number of well-managed animals, the following daily manure pick-up log can be used to document steps to minimize or eliminate food safety risks from domestic animals. This log complies with the requirements of the Ranch audit, item 08.07.

Date	Manure picked-up	By who?
/	Yes / None
